

EVO Lite Enterprise Series Firmware & App Update

Release Date	2025-05-12
App	1.4.228
Aircraft Firmware	1.0.3.71
Smart Controller Firmware	1.6.3.65
SE V2 Controller Firmware	1.0.3.65

New Features

- Added Aloft Air Control for automatic flight record imports and live telemetry
- Added Night Mode feature
- Added UOM reporting feature (China region only)
- Added six new languages: Lithuanian, Estonian, Latvian, and three others
- Added double confirmation for physical takeoff button

Bug Fixes and Optimizations

- Optimized Remote ID functionality
- Fixed screen gray-out and flickering issues
- Fixed compass calibration failure in GPS-denied environments
- Fixed parsing errors for Directional Photography settings in waypoint missions.
- Fixed other known issues

Note

- This update includes significant changes with new features, bug fixes, and optimizations. It is strongly recommended to update before the next flight.
- The EVO Lite Enterprise firmware can be updated either via OTA (Over-The-Air) or manually. For manual update instructions, please visit the [EVO Lite Enterprise download page](#) under the **Firmware & Release Notes** section. If you encounter any update issues or if the RC and aircraft fail to pair, please contact our customer support at +1 (844) 692-8835 or email us at support@autelrobotics.com.

Update Tips

1. Power on the remote controller and aircraft. Make sure that the aircraft and remote controller are well paired, both have a battery level of more than 50%, and the network connection of the remote controller is normal.
2. Open the Autel Enterprise App. If there is a version update available, you will receive a pop-up notification on the main interface of the App or you can manually select the update in the settings of the App.
3. Click "**Update All**", and the Autel Enterprise App will automatically download and update the firmware for the remote controller and aircraft.
4. After the update is complete, follow the pop-up instructions to restart the remote controller and aircraft.

Reminder

- During the update process, do not power off the aircraft and keep it connected to the RC.
- The update process takes about 20 minutes (depending on the network of RC).

Firmware Version Table

COMPONENT	EVO LITE ENTERPRISE SERIES
App	1.4.228
Aircraft	1.0.3.71
Camera	1.0.3.71
Image Transmission	1.0.3.71
