

# EVO Lite Enterprise Series Firmware & App Release Notes

---

Release Date	2024-11-28
App	1.4.161.31
Aircraft Firmware	1.0.2.23
Smart Controller Firmware	1.6.2.23
SE V2 Controller Firmware	1.0.2.23

---

## New Features

- Added oblique mission.
- Added Autel Care service for EVO Lite Enterprise.
- Added MGRS coordinate system.
- Added CGCS2000 coordinate system.
- Added an altitude warning at 120m (400ft).

## Bug Fixes and Optimizations

- Optimized the no-fly zone functionality.
- Optimized hand landing performance.
- Optimized translations for multiple languages.
- Fixed unit conversion errors in infrared temperature measurement.
- Fixed other known issues.

## **Note:**

- The EVO Lite Enterprise firmware and the app can only be updated through OTA (Over-The-Air) methods. However, if you encounter an update issue or the RC and Aircraft cannot pair, please contact our customer service at **+1 (844) 692 8835** or email us at [support@autelrobotics.com](mailto:support@autelrobotics.com).

### **OTA Update Tips**

1. Power on the remote controller and aircraft. Make sure that the aircraft and remote controller are well paired, both have a battery level of more than 50%, and the network connection of the remote controller is normal.
2. Open the Autel Enterprise App. If there is a version update available, you will receive a pop-up notification on the main interface of the App or you can manually select the update in the settings of the App.
3. Click "**Update All**", and the Autel Enterprise App will automatically download and update the firmware for the remote controller and aircraft.
4. After the update is complete, follow the pop-up instructions to restart the remote controller and aircraft.

### ***Reminder***

- During the update process, do not power off the aircraft and keep it connected to the RC.
- The update process takes about 25 minutes (depending on the network of RC).
